

Appendix E—Idaho Roadless Area Comparison

This appendix shows by forest a comparison of themes between alternatives for each Idaho Roadless Area. The following narrative describes which roadless areas had corrections made to either the forest plan or proposed rule themes or both. These changes were based on further review of the existing plans and information from the forests. It further describes changes to themes incorporated into the Modified Idaho Roadless Rule.

E.1 Corrections

Caribou Corrections

Two corrections were made to the existing plan and proposed rule themes on the Caribou portion of the Caribou-Targhee National Forest.

1. Prescription 4.3 (Special Area – Disperse Camping Management) was changed from Backcountry (BCR) to Forest Plan Special Area (FPSA). This corrected 400 acres of the Mt Naomi roadless area from BCR to FPSA and 1,700 acres of the Scout Mountain Roadless Area from BCR to FPSA for a total of 2,200 acres change from BCR to FPSA.
2. Prescription 3.2 (Semi-Primitive Recreation) was changed from BCR to FPSA. Within the Bonneville Peak roadless areas, 100 acres of the Pebble Mountain Ski area was changed from BCR to FPSA.

Challis Corrections

Two corrections were made to the existing plan and proposed rule themes on the Challis portion of the Salmon-Challis National Forest.

1. Management Area 11 was changed from Primitive to BCR because limited road construction is permitted by the forest plan.
2. Management Area 12 was changed from Primitive to BCR because limited road construction is permitted by the forest plan.

Clearwater Corrections

One correction was made to existing plan and proposed rule theme on the Clearwater National Forest.

1. Management prescription B2 (Recommended Wilderness) was changed from Wild Land Recreation (WLR) to BCR in the Mallard Larkins roadless areas because 300 acres were west of an existing road. The road isolated the 300 acre piece from the rest of the WLR area.

Another correction was made to the proposed rule theme. The areas between Lolo trail road and Nimipuii were corrected to Special Areas of Historic and Tribal Significance (SAHTS).

Idaho Panhandle Corrections

Three corrections were made to the existing plan theme on the Idaho Panhandle National Forest.

1. Management Areas 19 was changed from Primitive to BCR because limited road construction is permitted.
2. Ownership boundaries were corrected and themes adjusted for White Mountain roadless area with a land exchange. The roadless area increased by 100 acres.
3. Removed “potential” Wild and Scenic River corridors from FPSA and reassigned them in the appropriate theme.

Payette Corrections

Two corrections were made to the existing plan and proposed rule themes on the Payette National Forest.

1. The area within the Brundage Mt ski area master development plan where future development is planned was change from Primitive to the FPSA theme. This increases the FPSA theme within the Patrick Butte Roadless Area by 7,100 acres.
2. The Wild and Scenic River within the French Creek roadless area was determined to not be eligible. The FPSA theme was change to BCR for 10,900 acres and Primitive for 500 acres, which both was a reduction in FPSA theme acres. However, these combined changes increased FPSA within the French Creek Roadless Area by 7,000 acres total and Patrick Butte Roadless Area by 7,100 acres.

Sawtooth Corrections

One correction was made to the existing plan and proposed rule themes on the Sawtooth National Forest.

1. Prescription 4.3 (Concentrated Recreation) was corrected for both the existing plan and Proposed Rule themes from BCR to FPSA. 400 acres of the Bald Mountain Ski Area within the Buttercup Mountain Roadless Area were changed from BCR to FPSA.

Targhee Corrections

One correction was made to the existing plan and proposed rule themes on the Targhee portion of the Caribou-Targhee National Forest.

1. Prescription 4.3 (Special Area – Disperse Camping Management) was changed from BCR to FPSA. The Poker Peak Roadless Area corrected 100 acres from BCR to FPSA; the Garns Mt and Palisades both had >100 corrected from BCR to FPSA and the Garns Mt changed 200 acres for a total of 300 acres changed.

E.2 Changes to themes incorporated into the Modified Rule

Appendix P further describes which roadless areas were considered for theme changes based on public comment. Based on public changes were made to some themes and are reflected in the Modified Idaho Roadless Rule.

General Forest, Rangeland and Grassland (GFRG) to Backcountry/Restoration (BCR)

Small areas of GFRG adjacent to roadless area boundary

Unit	Roadless Area	Acres	Prescription
Boise	Whitehawk Mountain	100	5.1
Idaho Panhandle	East Cathedral	400	1,4,6,9,10,19
	Katka Peak	1,200	19
	Magee	600	1,4,6,9
	Mallard Larkins	100	6,9
	Scotchmans Peak	300	2,3,11
	Upper Priest	200	1,2,7,9,
Kootenai	Scotchmans Peak	400	2,8,14
Total		3,300	

Mule deer and other big game – unaltered areas

Unit	Roadless Area	Acres	Prescription
Caribou	Caribou City	18,600	6.2
	Elkhorn Mountains	26,700	6.2
	Meade Peak	26,100	6.2
	Oxford Mountain	4,400	6.2
	Red Mountain	5,100	6.2
	Toponce	9,800	6.2
Targhee	Bear Creek	46,800	6.1(b)
	Diamond Peak	10,800	6.1(b)
	Garfield Mt	17,500	6.1(b)
	Italian Peak	39,700	6.1(b)
Sawtooth	Boulder White Clouds	700	6.1
	Cache Peak	8,600	6.1
	Mount Harrison	21,900	6.1
	Pioneer Mountain	21,000	6.1
Total		257,700	

Steep visual area adjacent to Salmon area

Unit	Roadless Area	Acres	Prescription
Salmon	Napoleon Ridge	16,900	5B

General forest in Sage Creek watershed where phosphate development prohibited

Unit	Roadless Area	Acres	Prescription
Caribou	Sage Creek	1,900	6.2

Total	Change from GFRG to BCR	Acres	279,800
-------	-------------------------	-------	---------

Backcountry to GFRG**Phosphate – KPLAs, other existing lease areas and small areas outside if it is logical**

Unit	Roadless Area	Acres	Prescription
Caribou	Dry Ridge	5,400	2.7.2; 3.2; 8.2.2
	Sage Creek	1,400	2.7.2
	Stump Creek	1,000	2.7.3; 3.2
Total		7,800	

Roaded areas

Unit	Roadless Area	Acres	Prescription
Salmon	Agency	1,200	5B
	Deep Creek	7,100	4A; 5A
	Haystack	2,400	5B
	Jureano	4,300	4A; 5B
	Musgrove	1,000	5B; 5C; 3A-5B
	Sheepeater	9,100	5B; 3A-5B; 3A-5C
	South Deep Creek	4,800	5B; 5C; 3A-5B; 3A-5C
	West Big Hole	9,600	5B
Targhee	Caribou City	1,300	5.1.3(b); 5.4(c)
	Garns Mountain	2,600	3.2; 5.1.4(b)
	Mount Jefferson	2,400	5.1.4(b); 5.3.5
Total		45,800	

Adjacent to Jesse Creek

Unit	Roadless Area	Acres	Prescription
Salmon	Napias	9,300	5B
	Phelan	13,000	5A; 5B
Total		22,300	

Total	Change from BCR to GFRG	Acres	75,900
-------	-------------------------	-------	--------

Primitive to GFRG (roaded small area adjacent to boundary)

Unit	Roadless Area	Acres	Prescription
Targhee	Mt Jefferson	300	3.1.2

Backcountry to Primitive**Roadless Character – Display high roadless characteristics**

Unit	Roadless Area	Acres	Prescription
Clearwater	Mallard Larkins	31,600	8S, B2, C4, E1, E3, US
	Meadow Upper North Fork	42,800	8S, US
	Moose Mountain	14,000	A3
	North Lochsa Slope (Fish, Hungrey, Brimerick)	55,200	C8S, C4, C6, E1, US
	Rawhide	5,100	8S, US
Targhee	Mt Jefferson (slivers)	500	3.2(g), 5.1.4(b), 5.3.5
Total		149,200	

Total	Change from BCR to Primitive	Acres	149,200
-------	------------------------------	-------	---------

Changes to Wild Land Recreation**Backcountry to Wild Land Recreation – Slivers along edge of road**

Unit	Roadless Area	Acres	Prescription
Idaho Panhandle	Mallard Larkins	500	1,2,9,10, 11, 12, 20

Primitive to Wild Land Recreation – Tribal interests; or roadless character

Unit	Roadless Area	Acres	Prescription
Nez Perce	Rapid River	16,700	10, 11, 12, 16, 17, 19, 20
Payette	Rapid River	51,700	3.1, 3.2, 4.1c
Idaho Panhandle	Selkirk	10,700	1e (7,10, 11)
Total		79,100	

SAHTS to Wild Land Recreation – Pioneer Area

Unit	Roadless Area	Acres	Prescription
Idaho Panhandle	Mallard Larkins	22,100	(3) 6,9,10,11

Total	Change from BCR, Primitive and SAHTS to WLR	Acres	101,700

APPENDIX F—IDAHO ROADLESS RULE: DISCUSSION OF GENERAL FOREST, RANGELAND, AND GRASSLAND THEME IN THE PROPOSED IDAHO ROADLESS RULE

Introduction

The purpose of this appendix is to respond to public comments asking why certain roadless areas were assigned to the General Forest, Rangeland, and Grassland (GFRG) theme in the Proposed Idaho Roadless Rule. It is also intended to respond to the Roadless Area Conservation National Advisory Committee (RACNAC) recommendation to: “Provide the specific rationale for assigning each individual inventoried roadless area to the GFRG theme.”

The State used seven principles in assigning themes to Idaho Roadless Areas. Notable with regard to GFRG are the principles forest plan baseline; deference to county/tribal/public comments; and wildland urban interface (WUI)/forest health. In most cases the State concurred with forest plan direction. In the few exceptions discussed below, it was usually input to the forest plan revision process or consideration WUI that had an influence on the decision to allocate an Idaho Roadless Rule to GFRG.

In some cases the State allocated roadless areas to themes other than those in the forest plans based on input during the public comment process and the roadless characteristics of the area. Finally, where there are differences in Idaho Roadless Rule allocations, they have been analyzed in the final EIS.

Generally speaking, the State put areas into GFRG only when it was compatible with forest plans, table F-1. There are roadless areas assigned to GFRG in existing forest plans, where the State chose another theme.

Table F-1: Reasons for assigning the GFRG theme in the Proposed Idaho Roadless Rule

MGMT Rx	Description	Road construction	Timber cutting	Road construction for mineral leasing	Surface occupancy	Why General Forest	Roadless area/acres
Boise, Payette, Sawtooth							
5.1	Restoration and maintenance emphasis within forested landscapes	Road guideline. Road construction or reconstruction may only occur where needed: (a) to provide access related to reserved or outstanding rights; or (b) to respond to statute or treaty; or (c) to achieve restoration and maintenance objectives for vegetation, water quality, aquatic habitat, or terrestrial habitat; or (d) to support mgmt actions taken to reduce wildfire risks in the WUI areas; or (e) to meet access and travel mgmt objectives.	Vegetation guideline. The full range of treatment activities may be used to restore and maintain desired vegetation and fuel conditions. The available vegetation treatment activities include wildland fire use. Salvage harvest may also occur.	Road guideline. Road construction or reconstruction may only occur where needed: (a) to provide access related to reserved or outstanding rights; or (b) to respond to statute or treaty; or (c) to achieve restoration and maintenance objectives for vegetation, water quality, aquatic habitat, or terrestrial habitat; or (d) to support mgmt actions taken to reduce wildfire risks in the WUI areas; or (e) to meet access and travel mgmt objectives. In addition, road construction and vegetation management was permitted	Bald Mountain/1,600 Bear Creek/58,800 Diamond Peak/27,000 Garfield Mountain/19,800 Italian Peak/39,700

APPENDIX G—ROADLESS AREA TECHNICAL REVIEW

During the development of the Petition, several counties recommended dropping 25 roadless areas from the inventory because they were either less than 5,000 acres or they were roaded. Because the State could not change the Forest Service inventory, in the Petition they included a section titled: *Technical corrections to existing maps such as boundary adjustments to remove existing roaded areas*. Table 10, p. 61, of the Petition begins the list of 25 areas and the rationale for their inclusion. In addition, the RACNAC recommended to the Secretary of Agriculture, to: “...consider technical corrections on existing maps of inventoried roadless areas,” in their letter of December 19, 2006.

A call letter was sent to Idaho forest supervisors requesting a technical review of these areas. One additional area was added to the list, Buttercup Roadless Area on the Sawtooth National Forest, with the State’s concurrence. The forests have responded with the following results (table G-1). Forest supervisors believe no changes to the roadless areas are warranted with the exception of four.

Three areas are recommended for dropping from the inventory because they no longer meet the criteria for wilderness: Telephone Draw (4,900 acres, Caribou portion of the Caribou-Targhee National Forest); Hellroaring (1,700 acres, Idaho Panhandle National Forest); and Kootenai Peak (4,500 acres, Idaho Panhandle National Forest). One area, Buttercup (56,700 acres, Sawtooth National Forest) is recommended to have a 43-acre boundary adjustment for the existence of an authorized road adjacent to a ski area.

Outcome of the Technical Review

None of the areas will be removed from Idaho Roadless Areas; however the area in the Buttercup Roadless Area that is within the ski area boundary has been changed to a Forest Plan Special Area and shall be managed in accordance with the Sawtooth forest plan.

Table G-1. Results of roadless area review by forest supervisors in Idaho

Forest	Roadless area name and number	Approximate acres	Item to review	Review result
Boise National Forest	Nameless Creek #034	2,275	Smaller than 5,000 acres; Forest Service included as a roadless area because it is adjacent to wilderness.	Adjacent to existing wilderness and in aggregate is greater than 5,000 acres
	Peace Rock #026	191,435	County maintains this roadless area; does not qualify as roadless because it is heavily "roaded."	Unauthorized roads exist,—3.21 miles among 7 segments—affecting an estimated 100 acres; recommend retaining roadless boundary.
	Poison Creek #042	4,857	Smaller than 5,000 acres.	Authorized and unauthorized roads exist—2 segments less than 0.1 mile; recommend retaining roadless boundary.
	Poker Meadow #032	676	Smaller than 5,000 acres.	Adjacent to existing wilderness and in aggregate is greater than 5,000 acres.
	Snowbank #924	34,127	County maintains this roadless area does not qualify as roadless because it is heavily "roaded."	Authorized and unauthorized roads exist,—2 segments less than 0.1 mile; recommend retaining roadless boundary.
	Stony Meadows #027	13,507	507 county maintains this roadless area does not qualify as roadless because it is heavily "roaded."	Authorized and unauthorized roads exist—1 segment less than 0.1 mile; recommend retaining roadless boundary.
	Ten Mile/Black Warrior #013	118,628	Boundary adjustment: consistent with forest plan (area with FP Rx 5.1 in this roadless area); remove from roadless area in township 9N, range 9E, beginning at summit of Jackson Peak north on trail 151 to center of road 531 (see map).	Area meets criteria for roadless even though prescription allows development.
	Tennessee #033	1,016	Smaller than 5,000 acres; Forest Service included as a roadless area because it is adjacent to wilderness.	Adjacent to existing wilderness and in aggregate is greater than 5,000 acres.
	Whiskey #031	4,948	Smaller than 5,000 acres.	Adjacent to existing wilderness and in aggregate is greater than 5,000 acres.
Caribou National Forest	Telephone Draw #4169	4,916	Smaller than 5,000 acres.	Smaller than 5,000 acres; low value roadless characteristics due to surrounding development and motorized use; recommend dropping from inventory.
Idaho Panhandle National Forest	Blacktail Mountain PL #122	5,288	New draft forest plan acreage is fewer than 5,000 acres for this roadless area (4,960 acres).	Close to 5,000 acres and because of topography or vegetation is manageable in its natural condition.
	Blacktail Mountain SDPT #161	4,890	Smaller than 5,000 acres.	Close to 5,000 acres and because of topography or vegetation is manageable in its natural condition.
	Hellroaring #128	1,747	Smaller than 5,000 acres.	1,978 acres, does not meet criteria for roadless inventory in handbook; recommend dropping from inventory.

Forest	Roadless area name and number	Approximate acres	Item to review	Review result
	Kootenai Peak #126	4,512	Smaller than 5,000 acres.	Smaller than 5,000 acres; does not meet criteria for roadless inventory in handbook; recommend dropping from inventory.
	Skitwish Ridge #135	6,927	New draft forest plan acreage is fewer than 5,000 acres for this roadless area (4,750 acres).	Close to 5,000 acres and because of topography or vegetation is manageable in its natural condition.
	Wonderful Peak #152	4,965	Smaller than 5,000 acres.	Close to 5,000 acres and because of topography or vegetation is manageable in its natural condition.
Payette National Forest	Big Creek Fringe #009	1,083	Smaller than 5,000 acres; Forest Service included as a roadless area because it borders wilderness.	Adjacent to existing wilderness and in aggregate is greater than 5,000 acres.
	Council Mountain #018	16,562	County contends that roadless area designation needs to be removed on the east side and north side (middle fork and east fork of Weiser river drainages) for forest health reasons.	Meets roadless criteria, and prescription allows fuels and forest health treatments without roads.
	Indian Creek #019	4,806	Smaller than 5,000 acres.	Close to 5,000 acres and because of topography or vegetation is manageable in its natural condition.
	Poison Creek #042	390	County contends that roadless area designation should be removed because area is heavily "roaded."	Part of the roadless area is greater than 5,000 acres and there are no authorized roads in the area.
	Smith Creek #007	2,270	Smaller than 5,000 acres; Forest Service included as an roadless area because it borders wilderness.	Adjacent to existing wilderness and in aggregate is greater than 5,000 acres.
	Snowbank #924	1,520	County contends that roadless area designation should be removed because area is heavily "roaded."	Part of the roadless area is greater than 5,000 acres and there are unauthorized roads in the area.
Salmon National Forest	McEleny #13505	3,536	Smaller than 5,000 acres.	Adjacent to existing wilderness and in aggregate is greater than 5,000 acres.
Sawtooth National Forest	Pettit #017	3,065	Smaller than 5,000 acres; Forest Service included because it is adjacent to wilderness.	Adjacent to existing wilderness and in aggregate is greater than 5000 acres.
	Buttercup Mountain #038	56,653	43 acres developed because of the presence of a road to Seattle Ridge.	Authorized roads have existed since 1973 and this area should not have been included in the roadless area; recommend changing boundary to exclude 43 acres.
Targhee National Forest	Winegar Hole #347	4,031	Smaller than 5,000 acres.	Adjacent to existing wilderness and in aggregate is greater than 5,000 acres.

APPENDIX H—ALIGNMENT OF THE IDAHO ROADLESS RULE THEMES

Some refinements of the theme designations for the Idaho Roadless Rule have been made. These refinements are based on public comments stating that some information in the Petition did not reflect the theme allocations on the State maps or data used for the development of the draft EIS. This appendix summarizes the major refinements made in the proposed Idaho Roadless Rule.

H.1 Changes Pertaining To All Roadless Areas

Roadless Area Boundaries

The most current inventory from each national forest was used. New inventories, used during the revision process, were available for the Caribou, Clearwater, Nez Perce, and Sawtooth National Forests. The State did not use these inventories for the development of the Petition.

Roadless Area Acres

The total roadless area acreage and theme acreage were rounded to the nearest 100.

Special Areas

The Petition stated that management direction would not apply to special areas identified in forest plans, including areas such as research natural areas, wild and scenic rivers, and the like. These special areas have been removed from all themes (see attachment for a list of special areas by forest). Forest plan direction would apply to these areas.

H.2 Specific Changes by Forest and Roadless Area

Boise

Needles

The primary change is the number of acres placed into Wild Land Recreation, Primitive, and Backcountry themes (table H-1). There was no change in the State Petition map; the number of acres associated with each theme in the Petition table was in error.

Table H-1. Needles – Comparison of the Petition and the update

	Wild Land Recreation	Primitive	Backcountry	GFRG	Forest plan special areas
Petition	4,041	1,925	22,865	56	0
Idaho Roadless Rule	3,300	5,800	19,500	100	1,200

Caribou

All acres in the Idaho Roadless Rule were changed to match forest plan prescription acres and boundaries, including removal of special areas.

Hell Hole

The Petition had 278 acres of management prescription 2.8.3 in Primitive. This prescription is considered a special area where existing plan direction will apply; based on this, there are 0 acres of Primitive in the proposed Idaho Roadless Rule.

Challis

Boulder White Clouds

Boulder-White Clouds was updated to reflect the Central Idaho Economic Development and Recreation Act (CEIDRA) and the intent of the Petition. Areas recommended for wilderness in the bill were placed into the Wild Land Recreation theme; areas recommended for wilderness in the forest plan, but not part of the bill, were placed into the Primitive theme (table H-2).

Table H-2. Boulder-White Clouds – Comparison of the Petition and the update

	Wild Land Recreation	Primitive	Backcountry	GFRG	Forest plan special areas
Petition	98,775	0	40,344	0	0
Idaho Roadless Rule	115,800	0	23,500	0	0

Squaw Creek

Total acres of the Squaw Creek roadless area were in error in the Petition (132,521). The Idaho Roadless Rule correct acreage is 99,600 acres. All lands within Squaw Creek are in the Backcountry theme. No changes were made to the roadless area boundary. The acres on the Petition were in error, but a reason has been determined.

Clearwater

Hoodoo

The Petition placed 160 acres into the Backcountry theme; however, the Petition map does not show any lands in Backcountry. This is consistent with the proposed Clearwater Forest Plan. The proposed Idaho Roadless Rule data now reflects the map and the State's intent; there are 0 acres in Backcountry.

Idaho Panhandle

East Fork Elk

East Fork Elk was not in the Petition. East Fork Elk is located on the Kootenai National Forest and is primarily in Montana, but 75 acres are in Idaho and were placed in the General Forest, Rangeland, and Grassland (GFRG) theme in the Idaho Roadless Rule based on the proposed Kootenai/Panhandle Forest Plan prescriptions. The Kootenai has been added to the list of forests.

Grandmother Mountain

The Petition had 120 acres shown as GFRG. These areas are in special areas; therefore, the Idaho Roadless Rule shows 0 acres of GFRG. There was also one piece of Grandmother Mountain missing from the Petition coverage. This area was added (about 2,000 acres) to Wild Land Recreation. Forest plan special areas were also removed from Backcountry theme (table H-3).

Table H-3. Grandmother Mountain – Comparison of the Petition and the update

	Wild Land Recreation	Primitive	Backcountry	GFRG	Forest plan special areas
Petition	5,110	0	16,730	120	0
Idaho Roadless Rule	6,800	0	14,000	0	3,600

Katka Peak

The Petition did not show any GFRG. However, the Petition map indicates an area of GFRG (about 2,500 acres). This is consistent with the proposed Idaho Panhandle Forest Plan. The information has been corrected in the Idaho Roadless Rule to add 2,500 acres of GFRG.

Mallard Larkins

The Petition indicates that 33,530 acres are in the Special Areas of Historic and Tribal Significance (SAHTS). Several other forest plan special areas, such as research natural areas and wild and scenic river corridors overlap this area; therefore, the Idaho Roadless Rule direction would not apply and these acres have been removed from this theme. Total acreage in the SAHTS theme is 22,100 acres (table H-4).

Table H-4. Mallard Larkins – Comparison of the Petition and the update

	Wild Land Recreation	Primitive	Backcountry	GFRG	SAHTS	Forest plan special areas
Petition	49,480	0	46,240	80	33,530	0
Idaho Roadless Rule	49,500	0	46,200	100	22,100	11,500

Saddle Mountain

The Petition shows all of Saddle Mountain as GFRG (7,770 acres); however, this area should have been in Backcountry (consistent with Petition map). This change has been made in the Idaho Roadless Rule.

Roberts

Roberts is located on the Kootenai National Forest, so the information is now shown for the Kootenai. Acres and theme allocations remained the same.

West Fork Elk

The Petition indicates only 40 acres of this roadless area is in Idaho, but actually there are 3,700 acres in Idaho. West Fork Elk is located on the Kootenai, so the Idaho Roadless Rule now reflects this. All 3,700 acres are in Backcountry. (Note: 2001 Roadless Rule data show only 40 acres in Idaho, which is in error.)

Mt. Willard-Lake Estelle

Portions of the Mt. Willard-Lake Estelle Roadless Area are on both the Idaho Panhandle and Kootenai National Forests. The Petition did not reflect the 23,300 acres on the Kootenai, likely because the 2001 Roadless Rule data did not show any of the Kootenai portion in Idaho. All 23,300 acres are in Backcountry and the Idaho Roadless Rule reflects this change.

Nez Perce

The Nez Perce updated their inventory during Forest Plan revision. Based on the update, there have been modifications to the roadless areas, including dropping one roadless area, splitting one, and adding two.

Adjacent to Gospel Hump

This 2,400-acre area is adjacent to Gospel Hump and the Selway Bitterroot Wilderness. The Petition reflects these acres in the Gospel Hump Roadless Area. The Idaho Roadless Rule reflects this area as a separate roadless area (Adjacent to Gospel Hump).

Little Slate Creek

The Little Slate Creek Roadless Area (20,500 acres) was split into two parts. One is called Little Slate Creek (12,200 acres) and the other Little Slate Creek North (5,900 acres). In the Idaho Roadless Rule, all acres, except those in forest plan special areas, were placed into Backcountry, consistent with the Petition's intent.

Middle Fork Face

Middle Fork Face (10,400 acres) was not included in the updated inventory because the area has been developed. The Petition showed 10,400 acres in the Backcountry theme. The Idaho Roadless Rule does not reflect this area.

West Fork Crooked River

West Fork Crooked River (9,500 acres) was added to the inventory during the forest plan revision process; therefore, this area has been added to the Idaho Roadless Rule. The entire area is Backcountry.

Selway/Bitterroot

The Selway/Bitterroot (600 acres) was added to the inventory during the forest plan revision process; therefore, this area has been added to the Idaho Roadless Rule. This area is adjacent to the Selway Bitterroot Wilderness. All 600 acres were placed in the Primitive theme.

Payette

Needles

The primary change is the number of acres placed into Primitive and Backcountry themes (table H-5). There was no change in the Petition map; the number of acres associated with each theme was in error.

Table H-5. Needles – Comparison of the Petition and the update

	Wild Land Recreation	Primitive	Backcountry	GFRG	Forest plan special areas
Petition	91,054	10,994	29,117	0	0
Idaho Roadless Rule	90,200	7,100	31,500	0	2,500

Salmon

All acres in the Idaho Roadless Rule were changed to match forest plan prescription acres and boundaries, including removal of forest plan special areas.

Sawtooth

Boulder White Clouds

This area has been updated to reflect the CEIDRA bill and the intent of the Petition. Areas recommended for wilderness in the bill were placed into the Wild Land Recreation theme; areas recommended for wilderness in the forest plan, but not part of the bill, were placed into a Primitive theme. Remaining acres reflect forest plan prescriptions. In addition, about 25,500 acres of wild and scenic river corridors were removed from the Wild Land Recreation theme (table H-6).

Table H-6. Boulder-White Clouds – Comparison of the Petition and the update

	Wild Land Recreation	Primitive	Backcountry	GFRG	Forest plan special areas
Petition	164,800	70,750	86,274	712	0
Idaho Roadless Rule	115,500	87,300	84,500	700	34,700

Fifth Fork Rock Creek, Liberal Mountain, Lone Cedar, Mahogany Butte, Mount Harrison, Pioneer Mountain, Third Fork Rock Creek

The Petition placed areas with a management prescription 6.1 (Restoration and Maintenance Emphasis within Shrubland and Grassland Landscapes) into Backcountry, with the intent of reflecting the existing plan. However, the management direction in 6.1 better reflects GFRG; therefore, the following areas were changed in the Idaho Roadless Rule from Backcountry to GFRG:

Fifth Fork Rock Creek: 7,900 acres

Liberal Mountain: 1,900 acres

Lone Cedar: 6,800 acres

Mahogany Butte: 21,000 acres

Mount Harrison: 22,000 acres

Pioneer Mountains: 21,000 acres

Third Fork Rock Creek: 6,300 acres.

Smoky Mountains

The Petition shows 94 acres in GFRG. All these lands are in forest plan special areas; therefore, the Idaho Roadless Rule now shows 0 acres in GFRG.

The Petition shows 199,428 acres in Primitive, including 5,700 acres in management prescription 4.2. This prescription is roaded recreation in the Sawtooth Forest Plan. The intent was to reflect the forest plan; therefore, the 5,700 acres in management area 4.2 have been changed to Backcountry in the Idaho Roadless Rule (table H-7).

Table H-7. Smoky Mountains – Comparison of the Petition and the update

	Wild Land Recreation	Primitive	Backcountry	GFRG	Forest plan special areas
Petition	0	199,428	104,045	94	0
Idaho Roadless Rule	0	191,900	102,600	0	9,600

Cache Peak

The Petition indicated that 7,083 acres of management prescription 6.1 was Backcountry/Restoration and 19,422 acres of 6.1 were GFRG. However, Cache Peak includes three management prescriptions, 4.2, 5.1 and 6.1. Management prescription 6.1 was changed to GFRG (see discussion above). Prescription 4.2 was placed into Backcountry, consistent with the discussion for Smoky Mountains; and prescription 5.1 was placed into GFRG in the Idaho Roadless Rule. This update did not change the acreages shown in the Petition (table H-8).

Table H-8. Cache Peak – Comparison of the Petition and the update

	Wild Land Recreation	Primitive	Backcountry	GFRG	Forest plan special areas
Petition	0	0	7,083	19,442	0
Idaho Roadless Rule	0	0	7,100	19,400	0

APPENDIX I—GENERAL GEOTHERMAL DEVELOPMENT SCENARIO

The following discussion provides a general description of the activities, facilities, and surface disturbance that could be expected on a geothermal lease that would be developed for electrical generation. Because of the variety of other uses for which geothermal resources might be used, the surface impacts of potential direct uses are not discussed.

In the first stages of exploration, a lessee will drill a number of shallow temperature-gradient wells to determine both the area-wide extent of the temperature differences and where the highest temperature gradient occurs. Temperature-gradient wells can be drilled using a truck-mounted rig and can be up to 500 feet deep.

Usually temperature-gradient holes do not require a well pad; however, preparing the site for drilling could include leveling the surface and clearing away vegetation. The shallow depth of the drill holes and the smaller drilling equipment requires much less surface disturbance than that associated with deep well drilling.

If results of temperature-gradient wells are favorable, deep exploratory test well drilling would likely follow to determine with certainty the existence of a geothermal reservoir and its suitability for commercial development. Conventional oilfield drilling rigs, adapted for geothermal work, are used to drill deep wells. The size of the well pad needed to provide enough space for the drilling equipment varies with depth, but averages about 3 acres.

Roads would be needed to accommodate drilling and servicing of wells. Existing roads would be used wherever possible, but it is expected that some of the existing roads would be upgraded and that new temporary and permanent access roads would be constructed. Temporary roads would average about 30 feet in width from the top of the road cut to the bottom of the road fill; permanent roads would be about 50 feet wide.

If a geothermal resource should be discovered, the well would be tested to determine the characteristics of the reservoir. Further drilling would be anticipated to provide multiple wells for development and production. A typical 40-megawatt binary power plant would require eight production wells and four injection wells.

Geothermal resource development could involve constructing the infrastructure needed to produce the geothermal reservoir. The type of development that occurs would be based on the size and temperature of the geothermal reservoir. Pipelines would be necessary to transport hot water or steam from wells to power plants or other facilities for use. The pipelines that carry the hot water or steam are usually 24 to 36 inches in diameter and are covered with insulation. When feasible, they would parallel the well site access roads and other existing roads. The pipelines are usually located above ground to allow for the large amount of expansion and contraction associated with hot water or steam. Each pipeline would be expected to require about a 30-foot wide right-of-way. The length of pipeline through which geothermal water or steam can be carried is limited by potential energy losses. Consequently, geothermal production wells are typically within 1 to 2 miles of the power plant.

The conversion of geothermal energy into electrical power is an adaptation of the basic power cycle used in fossil-fueled electrical generating plants. The geothermal steam drives the turbine-generator in the same way as would steam produced in a boiler fired by oil or coal. Three types of power plants that harness geothermal resources are dry steam plants, flash steam plants, and binary cycle plants. Based on the assumption that developers would use the latest technology,

any future power plants in Idaho would probably be binary type. A typical binary power plant would occupy about 5 to 10 acres. Binary cycle power plants use water from the geothermal reservoir to heat another “working fluid.” The working fluid is vaporized and used to turn the turbine-generator units. The geothermal water and the working fluid never come in contact with each other. Binary cycle power plants can operate with lower water temperature 107°C to 182° C (225°F to 360°F) and produce few air emissions (U. S. Bureau of Land Management 2002).

Energy production from a geothermal facility could last up to 30 years or longer and involves the operation and maintenance of the geothermal field, including new drill sites. The drilling of new production wells, if necessary, in order to sustain or enhance a geothermal field would involve drilling and would create impacts that are similar to those discussed above in the development phase.

Transmission lines are needed to transmit electricity from the power plant to distribution lines. Each line would require an average of a 40-foot wide right-of-way.

After production ceases all wells would be plugged and all disturbed areas would be reclaimed in conformance with Forest Service and BLM standards. Reclamation includes removing all surface equipment and structures associated with power generation, re-grading the site to pre-disturbance contours, and replanting native vegetation.

APPENDIX J—IDENTIFICATION OF RESOURCE-DEPENDENT COMMUNITIES

A list of timber-dependent communities was developed by the Forest Service in 1987, and this list was used to help define communities potentially affected by the 2001 Roadless Rule (USDA Forest Service 2001). The criterion for being on that list was that at least 10 percent of employment was attributable to forest products. Based on these past assessments and a criterion of 15 percent of total labor income attributable to forestry resources to classify counties as being eligible for assistance under the National Forest Dependent Rural Communities Economic Diversification Act of 1990, the following criteria were used to identify timber-dependent counties where potential opportunities decrease under the Idaho Roadless Rule:

- 10 percent total labor income is attributable to timber or one or more mills located within the county; and
- Location is within a Bureau of Economic Analysis (BEA) economic area where there is a net decrease in acreage associated with management themes under which timber harvest is potentially allowed:
 - Aggregate “timber index” across all counties is negative under the Idaho Roadless Rule relative to the 2001 Rule,
 - Aggregate “general opportunity index” is negative under the Idaho Roadless Rule relative to existing plans.

The information used to identify timber-dependent counties is presented in appendix A of the “Opportunities for Small Entities” report which is available in the project record. Timber-dependent counties where there are reasonably foreseeable adverse effects are assumed to be those where timber harvest is projected to decrease significantly within the BEA as discussed in other sections of this report. North Idaho had the largest number of timber-dependent counties where timber harvest opportunities might be affected (8), followed by Central Idaho (4) (table 1).

The Forest Service identified mining-dependent counties using a criterion of 15 percent of total earnings attributable to mining for the regulatory flexibility analysis for the 2001 Roadless Rule (USDA Forest Service 2000b) and found a total of 109 out of more than 3,000 counties in the lower 48 States that satisfied the criterion. Included in these numbers was a discussion of Caribou County, Idaho, where earnings from leasable minerals is largely dependent on phosphate mining on the Caribou portion of the Caribou-Targhee National Forest within the Southeast BEA. Using a similar criterion of 15 percent of labor income attributable to mining for the 2000 data (Gebert and Odell 2007), Caribou County does not appear as a mining-dependent county (most likely because of disclosure constraints); however, Oneida County qualifies within the Southeast BEA. Custer (10.2 percent) and Clark (8.3 percent) Counties also have significant percentages of labor income attributable to mining. Counties significantly affected by the Smoky Canyon Phosphate Mine are Caribou, Power, and Bannock Counties in Idaho. However, based on increases in the number of roadless area acres assigned to management themes removing restrictions on phosphate mining (for example, the GFRG theme) for counties within the Southeast BEA under the Idaho Roadless Rule, it is unlikely that mining-dependent counties will experience adverse effects under this alternative and would likely see greater opportunities (table 1).

Table J-1. Natural resource-dependent counties in Idaho economic areas potentially affected by the Idaho Roadless Rule

Bureau of Economic Analysis economic area	Counties where potential opportunities would decrease under the Idaho Roadless Rule ^a	
	Wood products ^b	Mining-dependent counties ^c
North	Boundary, Bonner, Kootenai, Benewah, Ferry (WA), Latah, Pend Oreille (WA), Stevens(WA)	
Central	Clearwater, Idaho, Lewis, Nez Perce, Asotin WA	
Southeast	Bear Lake	Caribou, Oneida, Power, and Bannock
South Central	Blaine	
Boise	None ^d	

a. Counties not listed would see no change or potential increases in opportunities under the Idaho Roadless Rule relative to the 2001 Roadless Rule.

b. Counties listed would not likely decrease under the Idaho Roadless Rule relative to the 2001 Roadless Rule.

c. Counties listed would be likely to see increases in opportunities under the Idaho Roadless Rule relative to the 2001 Roadless Rule).

d. Less than 200 acres, scattered across three counties within the Boise BEA were found where opportunities decreased.

State-level Economic Profile

Table J-2. Two-digit NAICS information for Idaho

Industry	Industry output (million \$)	Industry output (% of total)	Employment (# of jobs)	Employment (% of total)	Labor income (million \$)	Labor income (% of total)	Total value added (million \$)	Value added (% of total)
11 Ag, forestry, fish & hunting	6,088	7.1	52,653	6.3	1,504	5.3	2,487	5.9
21 Mining	516	0.6	2,776	0.3	132	0.5	277	0.7
22 Utilities	984	1.1	1,872	0.2	198	0.7	574	1.4
23 Construction	6,185	7.2	61,928	7.4	2,160	7.6	2,568	6.1
Roads	622	0.7	7,366	0.9	264	0.9	312	0.7
